Site: Downtown, 90 W Broad St.

The project will replace main service electrical gear and transfer switches within City Hall.

Timeline: This project is scheduled to go out for bid early 2023. Construction is scheduled to start the middle of 2023.

MBE/ WBE participation TBD for and construction

City Hall Electrical Upgrades Project Scope:

The project will replace main service electrical gear and transfer switches within City Hall. The new gear will continue to be fed from the AEP downtown secondary grid and acts as a back-up electrical service within the building. The building's main electrical service from Columbus Dept. of Power (DOP) shall remain. The project will upgrade the back-up service size for better redundancy. As part of this project a new transfer switch, connected to both utility services, will be provided to serve the Security Office.
